EDUCATION

•National Institute of Technology, Warangal

2023-2027

Bachelor of Technology in Computer Science and Engineering

CGPA: 7.83

•Sri Chaitanya Junior College, Hyderabad

2023

Board of Secondary Education, Telangana

Percentage: 98.4

•Sri Chaitanya Techno School, Hyderabad

2021

Board of Primary Education, Telangana

CGPA: 10

EXPERIENCE

•SDE Intern - Backend / AI Infrastructure

May-June 2026

Xelron.AI

- Engineered modular RESTful API layers using FastAPI, SQLAlchemy, Alembic, and PostgreSQL, replacing manual spreadsheet workflows with an audited backend system of record.
- Architected strict API security, RBAC policies, and input validation contracts to prevent cross-client data contamination and maintain high system reliability.
- Practiced end-to-end SDLC standards by writing clean, maintainable code, performing peer code reviews, and resolving integration bottlenecks through active debugging.
- Engineered automated ingestion pipelines to reverse-engineer and parse complex GitHub repository pull requests into structured, programmatic data structures.

PROJECTS

•LLMOps RAG Pipeline

June 2026

Developed a full-stack conversational RAG platform for document-grounded Q&A.

- Tech stack: Python, FastAPI, PostgreSQL, Docker, OpenTelemetry, React, LlamaIndex, ChromaDB
- Built a multi-tenant FastAPI backend with isolated directory structures and databases to enforce strict tenant privacy and data isolation.
- Optimized API reliability and performance using SlowAPI rate-limiting, SHA-256 payload deduplication, async PostgreSQL handling, and retry backoffs.
- Integrated OpenTelemetry distributed tracing and logging pipelines for real-time system debugging, bottleneck diagnosis, and performance monitoring.
- Secured API endpoints with Supabase JWT authorization and engineered custom evaluation tools to audit backend output quality.

•QuizVerse

May 2026

Developed a secure full stack quiz management system with user and role-based access controls.

- Tech stack: Java, Spring Boot, PostgreSQL, Docker, REST APIs
- Migrated a monolithic backend to a decoupled microservices architecture in Java/Spring Boot for fault isolation, high availability, and modularity.
- Implemented a centralized API Gateway to handle seamless request routing, load management, and secure communication across independent microservices.
- Containerized microservices and PostgreSQL databases using Docker Compose to ensure consistent, cloud-ready deployment environments.
- Re-engineered distributed access control with Google OAuth2 and JWT validation, optimizing data access logic using Spring Data JPA.

TECHNICAL SKILLS AND INTERESTS

Programming Languages: Java, Python, C++

Backend & Web Technologies: REST APIs, Spring Boot, FastAPI, API Gateways, Microservices, Webhooks

Developer Tools & Observability: Git, GitHub, Docker, OpenTelemetry (Debugging & Tracing), Alembic, Postman

Databases: PostgreSQL, MySQL, Oracle SQL

Coursework: Data Structures and Algorithms in C++, Database Management Systems, Object-Oriented Programming, Operating Systems, Computer Networks

Soft Skills: Analytical Problem Solving, Collaborative Engineering, Production Debugging, Technical Communication

Areas of Interest: Backend Engineering, System Integration, API Performance & Production Reliability

ACHIEVEMENTS

•JEE Mains 2023 : AIR 3969

2023

•Leetcode Contest Rating : 1803
